OSI® WINTeQ™ Prepares and Protects Replacement Window Installers

Compatible products and comprehensive training ensure successful replacement window installation and eliminate contractor callbacks

AVON, OH (March 5, 2010) – With tax incentives in place for several more months, window replacement jobs in the United States steadily continue and contractors, while enjoying the ample work, could be exposing themselves to costly mistakes if not properly prepared for what these jobs entail. The WINTeQ™ Window Installation System from OSI®, along with OSI's guiding best practices and principles, protects contractors by providing them with the products and training they need to feel confident and equipped to ensure home owners are satisfied with the completed installs.

Replacement window installation is far more intense than window installation for new construction. There are more variables for the contractor to consider, from assessing the condition of the frame after the old window extraction to working closely with homeowners who are already moved in and settled. To avoid errors and maximize profits, contractors must be adequately trained and pay close attention to details they might not otherwise consider.

OSI WINTeQ supplies contractors with the tools and instruction they need for a successful replacement window installation. First, OSI WINTeQ gives contractors a complete system of compatible products that takes the guesswork out of replacement window installation. All OSI WINTeQ products have been tested to work together without compromising the performance of the overall system. Second, a detailed replacement window installation guide is available that walks contractors through everything from preparing the jobsite to calculating the amount of materials to have on hand to providing a comprehensive final inspection checklist.

What's more, OSI WINTeQ has developed an installation training and certification program. This program educates window installation contractors on the proper installation methods and the most effective installation products. By participating in the WINTeQ installation training program, "certified" installers are able to use this distinction to differentiate themselves from competitors.

To learn more about the OSI WINTeQ products, training or to download the informative installation guides, please visit www.winteqsystem.com.

About OSI

OSI was founded in 1966. Acquired by Henkel Corporation in 2004, OSI combines tough real-world, jobsite experience and a deep understanding of the trades with the sophisticated global innovation and manufacturing excellence of Henkel Adhesives Technologies. For more information on OSI WINTeQ visit www.osipro.com.
